CAUTION: Before servicing this chassis, it is important that the service technician should read the "Safety Precaution" and "Product Safety Notice" in this Service Manual.

1. SAFETY PRECAUTIONS

NOTICE: Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis or picture tube. The following precautions should be observed:

1. Do not install, remove, or handle the picture tube in any manner unless one wears shatterproof goggles. People not so equipped should be kept away while picture tube is handled. Keep picture tube away from the body while handling.

2. When replacing a chassis in the monitor, all the protective devices, such as, barriers, non-metallic knobs, adjustment and compartment shields, and isolation resistor-capacitor, must be put back in place.

3. When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.

4. Always use the manufacturer's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacturer's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.

5. Before returning a serviced monitor to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the monitor by the manufacturer has become defective, or inadvertently defeated during servicing. Therefore, the following checks should be performed for continued protection of the customer and service technician.

HIGH VOLTAGE

This monitor is provided with a high voltage hold down circuit for clearly indicating that voltage has increased in excess of a predetermined value. Comply with all notes described in this Service Manual regarding this hold down circuit when servicing, so that this hold down circuit may function correctly.

SERVICE WARNING

With minimum Brightness and Contrast the operating high voltage in this display is lower than 30KV.

If any component having influence on the high voltage is replaced, confirm that the high voltage with minimum Brightness and Contrast is lower than 30KV. To measure high voltage use a high impedance high voltage meter. (SENSITIVE RESEARCH MODEL: ESH or Equivalent). Connect (-) to chassis earth and (+) to the CRT anode button.

NOTE: Make sure to turn power switch off before making the connection to the Anode Button.

X-RADIATION

TUBE: The primary source of X-radiation in this monitor is the picture tube. The tube utilized in this chassis is specially constructed to limit X-radiation emissions. For continued X-radiation protection, the replacement tube must be the same type as the original, manufacturer approved type.

When trouble shooting and making test measurements in a monitor with a problem of excessive high voltage, avoid being unnecessarily close to the picture tube and the high voltage components. Do not operate the chassis longer than is necessary to locate the cause of excessive voltage.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the color monitor units have special safety related characteristics. These are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for high voltage, wattage, etc. Replacement parts that have these special safety characteristics are identified in this Service Manual. Electrical components having such feature are identified by marking with "!" on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have same safety characteristics as the manufacturer recommended replacement one, shown in the parts list in this Service Manual , may create shock, fire, X-radiation, or other hazards. Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult this Service Manual.

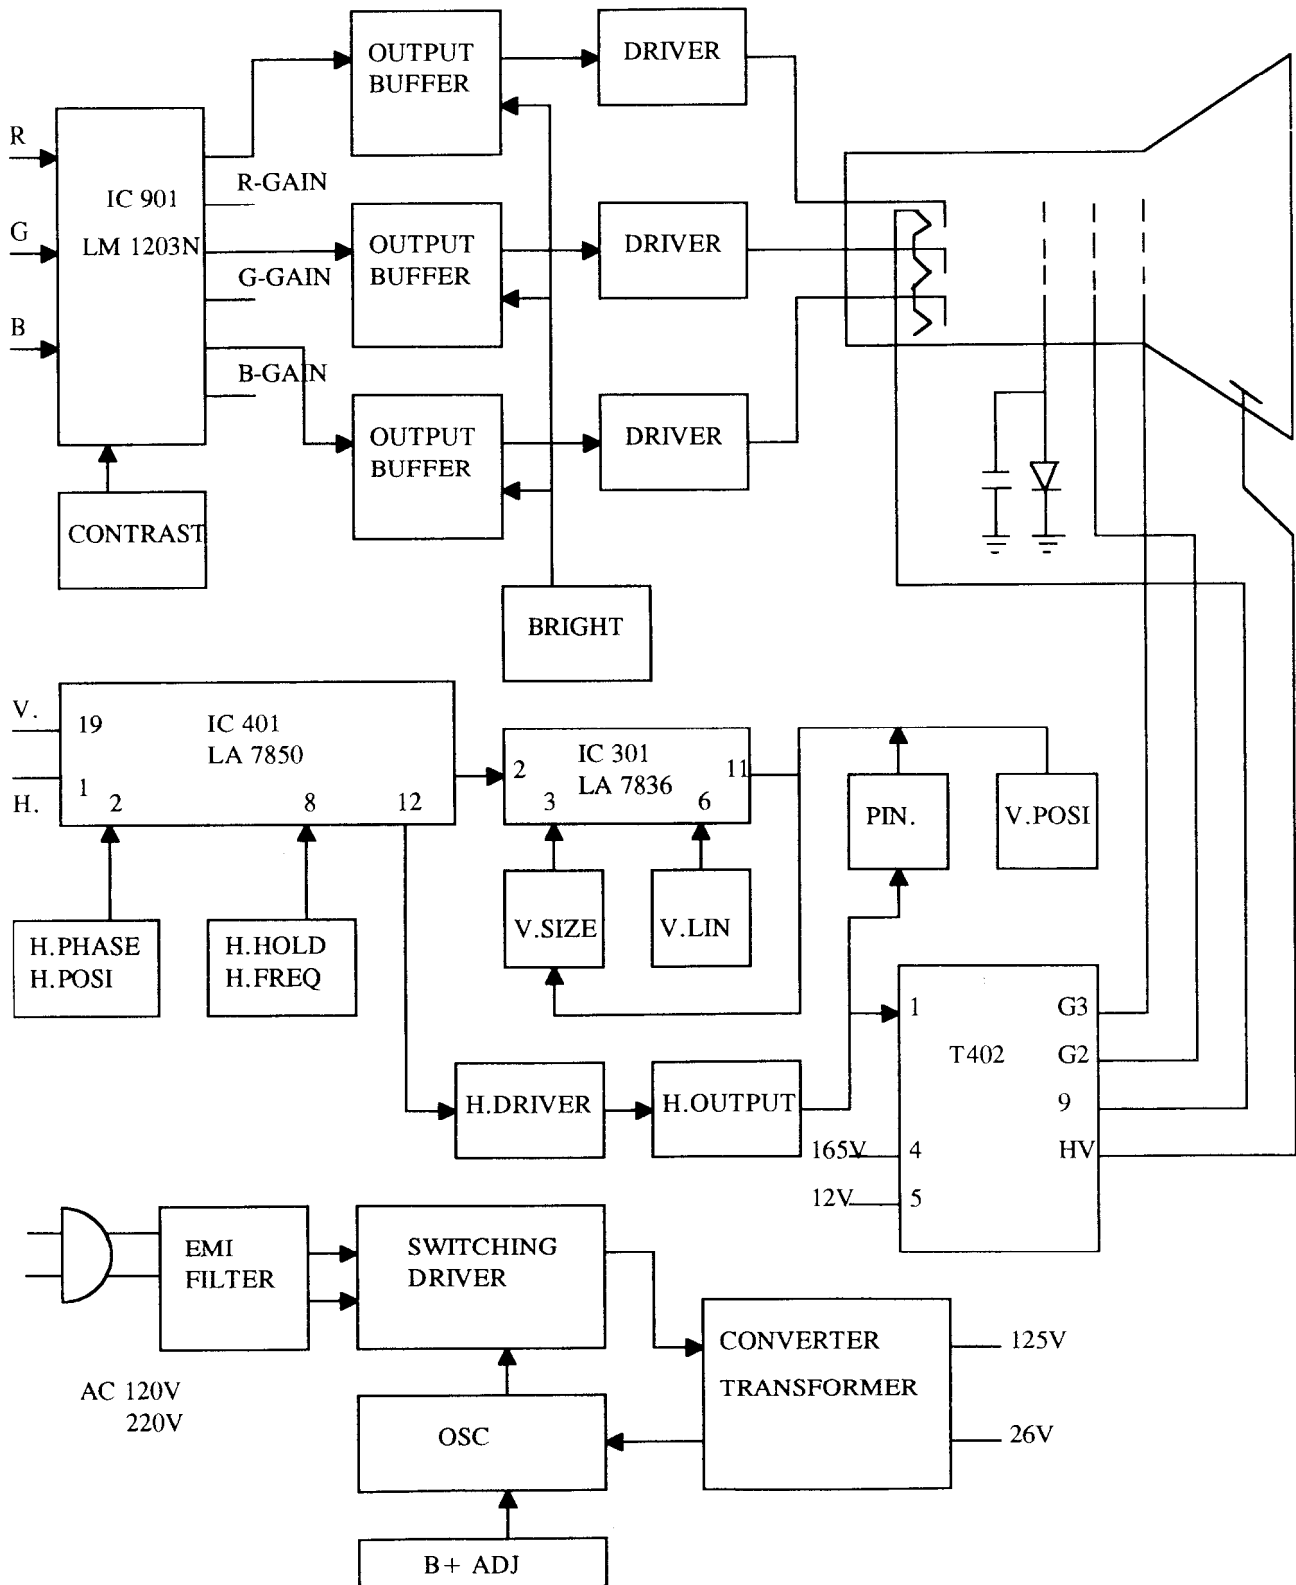

2. INTRODUCTION

This service manual gives information about the NT-2700 / 2701 / 2702 color display monitors. These color monitors accept analog inputs for R.G.B.; they feature stable convergence, easy maintenance and compact styling.

3. SPECIFICATION

	<i>C G A</i>	<i>E G A</i>	<i>V G A</i>
MODEL:	NT-2700	NT-2701	NT-2702
PICTURE TUBE:	27" 0.84mm D.P.	27" 0.84mm D.P.	27" 0.84mm D.P.
SIGNAL TYPE:	R.G.B.SEPARATE 1.0-4.0Vp-p	R.G.B.SEPARATE 1.0-4.0Vp-p	15 PIN D-SUB ANALOG 0.7Vp-p
VIDEO BAND WIDTH:	15 MHz	30MHz	45MHz
RESOLUTION:	560 x 240	640 x 350	640 x 480
FREQUENCY:	15.75 KHz	25KHz	31.5KHz
POWER SUPPLY:	120-220VAC 50-60Hz	120-220VAC 50-60Hz	120-220VAC 50-60Hz
POWER CONSUMPTION:	85W	110W	115W
USER CONTROLS:	BRIGHTNESS, CONTRAST, H-SIZE, H-POSITION, V-SIZE, V-POSITION, V-HOLD, PINCUSHION.		
SIGNAL CONNECTOR:	PIN1: RED, PIN2: GREEN, PIN3: BLUE, PIN4: GROUND, PIN5: NC, PIN6: SYNC.		
NT-2702:	PIN1: RED, PIN2: GREEN, PIN3: BLUE, PIN4: GROUND, PIN5: NC, PIN6: RED RETURN, PIN7: GREEN RETURN, PIN8: BLUE RETURN, PIN9: NC, PIN10: DIGITAL GROUND, PIN11: DIGITAL GROUND, PIN12: NC, PIN13: HOR. SYNC, PIN14: VERT. SYNC, PIN15: NC		
POWER CONNECTOR:	PIN1: LINE, PIN2: GROUND, PIN3: NEUTRAL.		

4. BLOCK DIAGRAM

5. ADJUSTMENT PROCEDURES

5.1 INITIAL SETTINGS

Before turning on the power, all initial settings shall be positioned as following (Clockwise and counterclockwise directions shall be followed from a position facing the front of the monitor itself.)

- 5.1.1 Set the R.G.B. Bias pots R938, R937, R936, driver R950, R951, R952 counterclockwise at center position.

5.2 SMPS DC OUTPUT SETTING

- 5.2.1 Plug the AC line cord directly into a 120 V AC 60 Hz outlet, then turn the AC power switch on.
- 5.2.2 Plug the Video cable directly into a compatible Signal Generator. Set it to the cross-hatch pattern video signal.
- 5.2.3 Adjust the R112 to set the horizontal deflection B+ (the connection point of R117/R424) to 125.00 \pm 0.50 VDC (NT2701 B+ 113.50V, NT2702 B+ 127.5V)
- 5.2.4 Check all the other output DC voltages or AC wave to meet the following specs:
 - 1) The connection point of L905/C920 = 165.0V \pm 2.0VDC
 - 2) The connection point of L103/C119 = 26.0V \pm 1.0VDC
 - 3) The connection point of L901/C906 = 12.0V \pm 0.5VDC
 - 4) The connection point of (FBT #9/R429) = 24Vp-p \pm 1Vp-p

5.3 H-HOLD SETTING

- 5.3.1 Change the video signal to a compatible Signal Generator to a 350 line color bar pattern video signal.
- 5.3.2 Short pin 1 of IC401 to ground through a 100 uf/16vEC cap, adjust the R401 to get the picture to stand up vertically, then release the ground shorting.

5.4 H-SIZE & H-CENTER SETTING

- 5.4.1 Change the video signal to a compatible Signal Generator to a 350 line crosshatch pattern video signal. (NT2702 480 LINE)

5.4.2 Adjust VR3 (H-Phase) to set the picture in the center of the raster.

5.4.3 Adjust VR2 (H-Width) for a horizontal display size of maximum.

5.5 V-SIZE & V-POSITION SETTING

5.5.1 Change the video signal to a compatible Signal Generator to a 350 line crosshatch pattern video signal. (NT2702 480 LINE)

5.5.2 Adjust R324 (V-Size) for a vertical display size of maximum.

5.5.3 Adjust R319 (V-Position) to set the picture in center of the raster.

5.5.4 Adjust R314 (V-Lin) to set the vertical linear $\pm 5\%$

5.6 THE SIDE-PINCUSHION ADJUSTMENT

5.6.1 Change the compatible Signal Generator video signal to a 350 line crosshatch pattern video signal. (NT2702 480 LINE)

5.6.2 Adjust VR1 (Pin-Ad) to modify the left-right side pincushion distortion to meet the specs of 1.00mm \pm 0.25mm.

5.7 BACKGROUND BRIGHTNESS SETTING

5.7.1 Change the compatible Signal Generator video signal to a 350 line blank pattern video signal. Set the Brightness VR (R529) to the maximum position and the Contrast VR (R990) to a minimum position. (NT2702 480 LINE)

5.7.2 Adjust the G2 VR until the background raster is just visible and note what color appears. Now adjust the other 3 colors of the Bias VRs (R938 Red Bias, R937 Green Bias, R936 Blue Bias) to obtain a dark gray raster.

5.7.3 Re-adjust G2 VR and Check the brightness within range of 2 \pm 0.5FL until the retrace line is barely visible.

5.8 R.G.B. GAIN SETTING

5.8.1 Change the video signal to a full white Pattern video signal.

5.8.2 Set contrast VR990 to maximum and adjust Brightness VR (R529) until the background raster is barely visible.

5.8.3 Adjust R938 , R937 , R936 to obtain a full white pattern, and check to make sure the

brightness is within a range of 20 +/- 5 Fl.

5.9 WHITE BALANCE CHECKING

5.9.1 Adjust the Brightness VR (R529) until the background raster is just visible

5.9.2 Adjust the Contrast VR (R990) to obtain a full white pattern of 4.0 +/- 0.5 Fl and check the screen center color temperature within range of $x = .281 \pm .025$, $y = .310 \pm .025$, if not then repeat 5.8.

5.10 FOCUS SETTING

5.10.1 Adjust the Brightness VR (R529) until the background raster is just visible. Adjust the Contrast VR (R990) to full white pattern of 20.0 +/- 1.0 Fl.

5.10.2 Change the compatible Signal Generator video signal to a 350 line full white crosshatch pattern video signal. (NT2702 480 LINE)

5.10.3 Adjust the Focus VR to get an optimized focus for the total screen.

5.11 MISCONVERGENCE SETTING

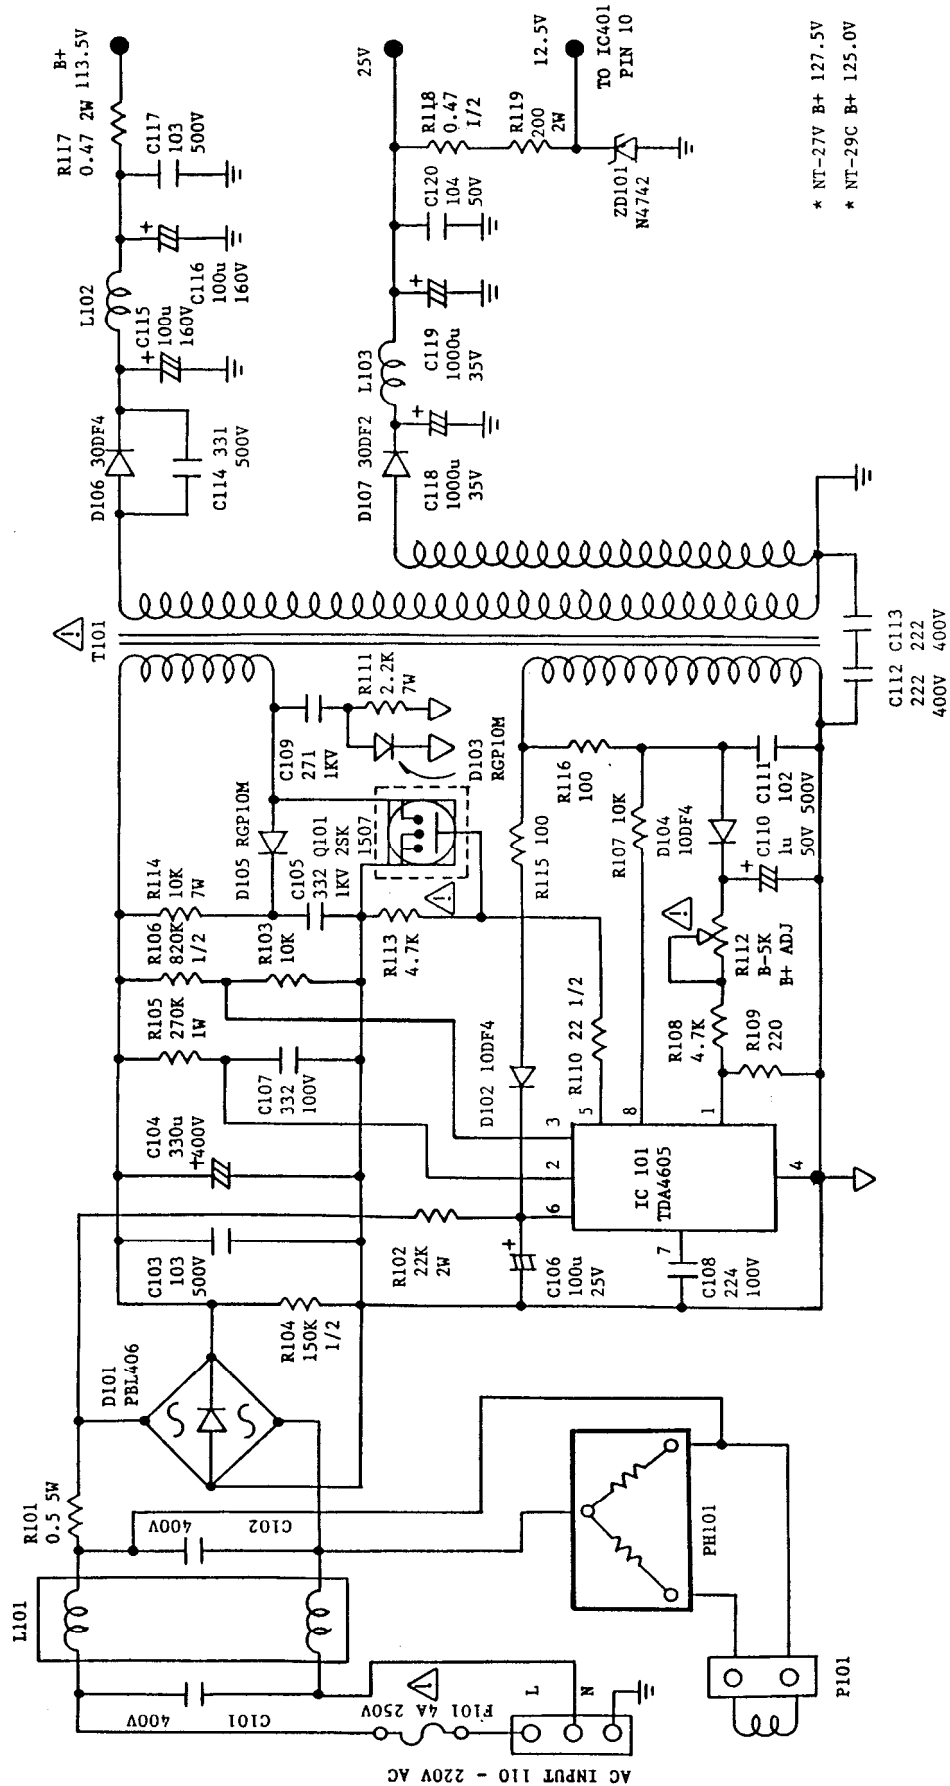

5.11.1 Change the compatible Signal Generator video signal to a 350 line crosshatch pattern. (NT2702 480 LINE)

5.11.2 Open the knobs of the two 4-pole magnets, and make the blue and red vertical lines match with each other at the center of the picture.

5.11.3 Turn the magnet while keeping the 4-pole magnets open and make the blue and red lateral lines match with each other.

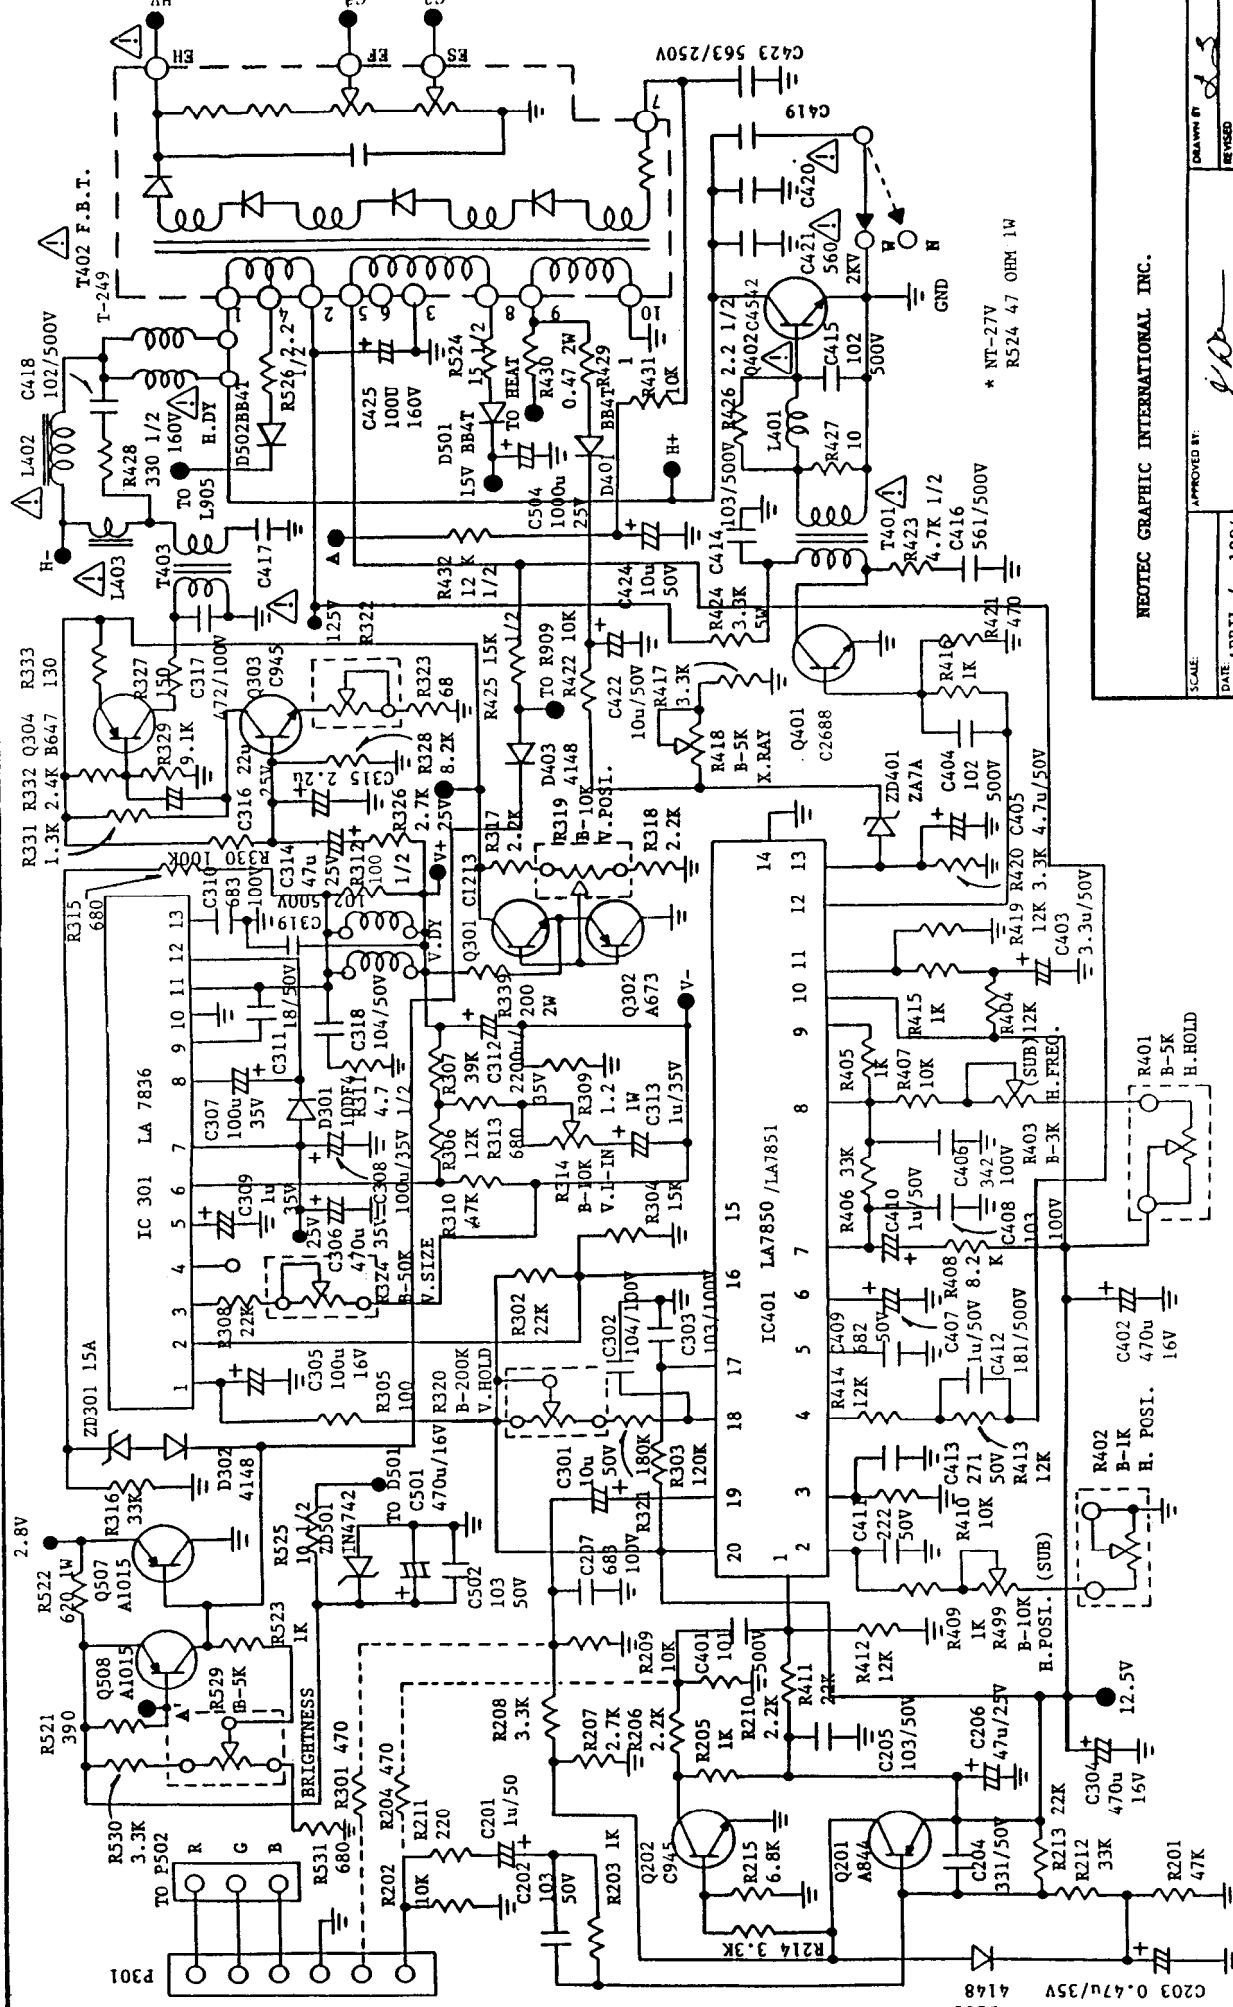

5.11.4 Open the knobs of the two 6-pole magnets, and make the green vertical line match with the blue and red vertical lines at center of the picture.

5.11.5 Turn the 6-pole magnets while keeping their knobs open until the green lateral line matches with the blue and red lateral lines at the center of the picture.
