SETTING UP ROTATION VIII (Mechanical)

STEP 1.

MOUNT LEGS (see figure A)

After unpacking, tilt cabinet to a side without a shooter onto a rug or soft surface. Remove packing blocks and install legs into the leg mounts in the corners of the cabinet along with the 2 inch washers sandwiched between the legs and the cabinet bottom. Unravel line cord but do not plug in. Note the location of the on-off switch. When the cabinet is upright, the on-off switch is located under the flipper between the "WEST" and "SOUTH" players. Tilt the game onto its legs and check to see if it is sturdy.

STEP 2.

REMOVE GLASS TOP

Remove the top by unlatching the glass and then pulling the glass straight up. The four latches can be found on the inside of the cabinet, just above the coin doors, and can be seen in (Figure D). When replacing top, reverse above order.

IMPORTANT: Shooting stations are indexed to player score readouts on bottom arch. Therefore, always replace glass top assembly with the north position corresponding to the "NORTH POSITION" label stapled on the cabinet top edge.

STEP 3.

LIFT PLAYFIELD

After removing glass top assembly step (No. 2), rotate playfield to an in-between shooting position. That is, the bottom center of playfield is to align with any flipper button located above the ball shooter assembly. (Fig. B). Remove the two light shields that are closest to the bottom arch, and remove the exposed (tie-down) wing nuts (Fig. C). Lift lower edge of playfield about 20°, then pull back, off the front hinge, and let it slide down to the build in stops (about 5") (Fig. D).

Raise the playfield as required, lift the two hinged playfield support brackets, and lower playfield over them, with the support bracket tips protruding into the tie-down post holes (Fig. E).

TO CLOSE GAME, FOLD PLAYFIELD SUPPORT BRACKETS BACK TO THE ORIGINAL POSITION, TIGHTEN THUMB SCREW, AND LOWER PLAYFIELD TO ABOUT 20°, THEN PUSH IT BACK TO ITS ORIGINAL POSITION. THIS WILL REQUIRE A SLIGHT LIFTING OF THE PLAYFIELD FRONT TO GET IT BACK INTO THE HINGE. THEN LOWER THE PLAYFIELD OVER THE TIE-DOWN POSTS, REPLACE WING NUTS, AND LIGHT SHIELDS.

STEP 4.

REMOVE THREE (3) SHIPPING BRACKETS-ALL 3 BRACKETS ARE PAINTED RED

While the playfield is up, remove the two red shipping brackets from the shelf. Next, remove the third shipping bracket located behind one of the coin doors marked with a red dayglo label on the door. All brackets can be removed with a 1/4 inch nut driver. Keep all three shipping brackets in case the game has to be shipped for repairs.

STEP 5.

INTRODUCTE THE STEEL PLAYBALL

Lower playfield into playing position, (see Step 3). Rotate the table one turn (360°) to make sure that the table is free to turn. If not, the hinge brackets are not properly seated on the shaft (see figure J). Place the ball between the bottom flippers and let it roll down hill under the credit/ball display into the "outhole". Replace the glass top, (see Step 2).

STEP 6.

LEVEL THE CABINET

Bring game to its playing location. Place a level from NORTH to SOUTH, then WEST to EAST to check game. At the bottom of each leg is an adjusting guide, when game is level, tighten lock nut with a 9/16" open end wrench.

IMPORTANT: If game is not level, each player will have a different "Action" to his play.

STEP 7.

TO ATTACH HIGH BASE (figure H)

Place cabinet on a padded surface and turn on a side without a shooter. Remove skid blocks and proceed as in (Figure H).

GENERAL ADJUSTMENTS AND INSTRUCTIONS

TO REMOVE COMPLETE GAME FROM CABINET (see figure F)

- A. Disconnect line cord
- B. Lift playfield (see step 3 of setting up instructions).
- C. Remove four bolts and washers from false bottom.
- D. Unplug one connector by cash box.
- E. Close playfield (see step 3 of setting up instructions).
- F. Lift out complete game from cabinet, line cord will come out with unit.

TO INSERT COMPLETE GAME BACK INTO CABINET

- G. Insert line cord through large hole in bottom of cabinet and pull as you lower unit into cabinet. Make certain the two holes in false bottom fit on the 2 locating studs located in bottom of cabinet, this positions the unit in center of cabinet. The two studs are not mounted symmetrically, and the game will fit back into the cabinet only one way. Also note location of the connector unplugged in step D. If game has not seated properly, check if the line cord is pulled all the way out, if there are any loose parts in bottom of cabinet, or if the locating studs are in proper alignment with holes. When properly seated, the game will not rock or shift.
- H. Lift playfield (see step 3).
- I. Insert four bolts with washers through false bottom and tighten securely.
- J. Close playfield (see step 3).

TO REMOVE ROTOR FROM FALSE BOTTOM (figure G)

- K. Remove complete game from cabinet (see above) and place it on a table.
- L. Remove encoder assembly by loosening two set screws on main shaft and remove two wood screws holding bracket and encoder assembly. Then remove entire assembly. WHEN REPLACING, CHECK ENCODER FOR PROPER SETTING AND TIGHTEN THE TWO SET SCREWS TO A MAXIMUM OF 16in. lbs.
- M. Loosen the four screws holding motor bracket assembly. Slide the assembly forward and remove "V" belt.
- N. Loosen the two set screws holding the pulley and remove pulley. WHEN REPLACING, THE TWO DRIVE PULLEY SET SCREWS MUST BE INDEXED ON FLATS OF MAIN SHAFT AND TIGHTENED TO A MAXIMUM OF 140in. lbs. (TO CHECK IF TIGHT, HOLD PULLEY AND MOVE IN BOTH DIRECTIONS).
- O. Loosen the two set screws on collar and remove collar. WHEN REPLACING, MAKE CERTAIN THE TWO COLLAR SET SCREWS ARE TIGHT (140in. lbs. max.) AND ARE INDEXED ON FLATS OF MAIN SHAFT.
- P. Lift off playfield and rotor assembly.
- Q. To assemble rotor reverse procedure.

MOTOR PULLEY BELT

Position motor assembly in center of screw slots. Belt tension should be springy.

OPTICAL SENSOR

The gap between the optical sensor and the reflective tape bracket has been set at the factory, when replacing one or the other, maintain the same alignment and gap. The optical sensor must also be mounted square on the optical P.C. board.

FLIPPER ALIGNMENT

The playfield is dimpled at the end of the two lower flippers. The center line of the flipper should run through the dimple for proper alignment. When flipper has to be rotated, make sure that the set screws holding the flipper shaft are torqued to a min. of 70 in. lbs.

SWING GATE

The swing gate, located by the spinner, is controlled with a torque spring. To adjust tension, rotate the upper end of the torque spring one turn in either direction, as required.

LIGHT SHIELDS

Light shields should be mounted loose to allow for heat expansion. Do not fully tighten mounting screws or chrome acorn nuts.

WIRE FORMS

Wire forms should be checked periodically for the required dimension from under the wire to top of the playfield. The dimension should be maintained at 1/2 inch. The two wire forms by the lower flippers should be 1/4 inch from the top of the playfield.

SWITCHES

All switch assemblies consist of leaf springs, contacts, separators, plastic tubing and screws to hold them to the mounting surface. Before attempting to adjust a switch assembly, make sure that these screws are tight. If not, tighten screw closest to the contact end of the leaf spring first. This will prevent the assembly from being secured in such a manner that the leaf springs tend to fan out. In general, all leaf springs are adjusted for a 1/16" gap in the open position and 0.10" overtravel or wipe indicated. All contacts should be in good condition. Unless otherwise instructed, they should be dry or non-lubricated to resist corrosion. Filing or burnishing breaks the finish and encourages corrosion. Clean by closing the contacts over a clean piece of paper (e.g. a business card) and wiping gently until the contacts are clean. For the flipper button switch assemblies ONLY: Tarnish can be removed with a contact file followed by a burnishing tool. Severely pitted contacts must be replaced as an assembly. In general, contacts need be cleaned or replaced and adjusted only when they are found to be a source of game mal-function.

CLEANING PLAYFIELD

The Midway playfield has an improved tuff-coat finish with excellent wearing properties. Its life expectancy, as well as play appeal, can be extended by periodic cleaning of the playfield.

Midway recommends you clean your playfield with Wildcat #125 (Wildcat Chemical Co., 1333 W. Seminary Drive, Ft. Worth, Texas 76115). Wildcat #125 is a combination cleaner and polish. Midway has tried and tested this product and found it to be very effective. If Wildcat #125 is not available, Midway suggests you ask your Distributor to order it. Inspect and hand polish the ball in a clean cloth. A chipped ball must be replaced. It can ruin the finish on the playfield in a short period of time.

DON'T: Use water in large quantities, highly caustic cleaners, abrasive cleaners or cleaning pads on the playfield. Do not allow a wax or polish build up. Waxes yellow with age and spoil play appeal.
