KIT INSTALLATION

WARNING:

MAKE SURE ELECTRICAL POWER TO THE GAME IS OFF BEFORE STARTING THE KIT INSTALLATION.

PREPARATION

1. Disconnect and remove the old printed circuit board(s) from the cabinet.

2. Remove or open the control panel, and disconnect and remove the buttons and joystick(s) from the control panel.

3. Remove any covering from the control panel overlay, and then remove the control panel overlay.

4. Place the drill hole template over the control panel to determine where any new holes should go. Center punch any needed new holes on the control panel.

5. Cut out the new holes using a 1-3/16" hole saw.

6. If there is an additional control panel cover, figure 1 (such as plastic or lexan) that will be utilized, cut any additional holes using the same template. *cover is not included in the kit.

7. Plug up unused holes with a wood dowel (1-1/8" diameter) and sand any rough edges.

INSTALLATION

Marquee Installation

8. Remove the marquee plexi glass, marquee overlay, and the cabinet graphics.

9. Install the new marquee and replace the plexi glass. Clear plexi glass is included in “full” kit.

Control Panel Overlay Installation (See Figure 1)

10. The control panel overlay in the kit is oversized to accommodate most control panel sizes. Center the overlay on the control panel, leaving some excess material at the edges.

11. Remove the protective backing from the overlay and press it down on the control panel, keeping it properly aligned. Press it down firmly, smooth out any bubbles, and press it over the edges.

12. Trim any excess from the overlay. Place the drill hole template on top of the overlay, aligning it with the joystick holes. Pierce through the overlay at each control panel hole. Then, cut away overlay material covering the joystick and button holes. Remove the template and clean off the overlay.

13. Peel off the backings of the 6-button and joystick decals, align over the control panel holes, and press in place on the overlay (refer to the drill hole template for proper placement). Using a knife, trim material from the center hole of the joystick decal.

14. Install the control panel cover, figure 1. (if required).

CABINET DECAL INSTALLATION

19. Remove monitor glass and install monitor card

20. Peel-off the backing to the instruction decals and place on both the top and bottom of the monitor card. (See Figure 5). Also, apply the cabinet decals to both sides of the cabinet.
Re-assembly of Components

15. Notice that there are two white buttons. See figure 2. The WHITE buttons are START buttons. Install the PLAYER ONE button on the top left-hand side of the control panel, and the player two button on the top right-side of the control panel.

![Figure 2: Start Buttons](image)

**Figure 2: Start Buttons**

16. Install all buttons and retaining rings on the control panel as shown in Figure 3. Install two red buttons to the immediate right of each joystick, install two green buttons to the right of the red ones, and install two blue buttons to the right of the green ones.

![Figure 3: Control Panel Buttons and Switches](image)

**Figure 3: Control Panel Buttons and Switches**

17. Install the switches on the buttons as shown in figure 3. Orient the switches so that when a button is pressed, the plastic contact on the switch is depressed.

18. Install the joysticks on the control panel as shown in figure 4.

![Figure 4: Joystick Installation](image)

**Figure 4: Joystick Installation**

NOTE: all switch wires used in this game must be wired to the normally-open connection on the switches. Each switch requires a ground wire on the common connector and the appropriate control or switch wire on the normally-open connector of the switch.

21. Reconnect the existing jamma connectors to the control panel according to the chart in table 1.

22. Connect the player 1 and the player 2 kick buttons to the auxiliary cable harness as shown in figure 6. Make the connections according to the chart in table 2.

![Figure 6: Auxiliary Cable Harness](image)

**Figure 6: Auxiliary Cable Harness**

TEST SWITCH WIRING

23. Your cabinet may already equipped test switch. An optional test/volume bracket (see Figure 7) is available through your local CAPCOM distributor (part number 03-0050). When installing, the test switch bracket should be mounted inside the coin door and on top of the cash box for easy access. (See Page 7 for wiring detail)

NOTE: only the test switch is used for this game; the volume up/down switches are disabled.

**Volume adjustments must be made through the volume control knob located on the PC board.**

![Figure 7: Test/Volume Bracket](image)

**Figure 7: Test/Volume Bracket**

20. Install the four (4) mounting brackets to the underside of the “A” cartridge as shown in Figure 10.

![Figure 10: Mounting Bracket Installation](image)
