TECHNICAL NOTICE

Primal Rage kit boards are designed for either **Low** or **High** impedance monitors. To change the PCB to high or low impedance, use the 4 jumpers at location A-3 which is near the Jamma connector. To set for high impedance move the jumpers to HI, and to set for low impedance set the jumpers to LO. If set incorrectly on LO for a high impedance monitor your screen will be too dark. If set incorrectly on HI for a low impedance monitor your screen will be too bright.

If you have any questions call Time Warner Interactive/Atari Games at (408) 434-3950
