## SPECIFICATIONS

- INSTALLATION SPACE : $2160 \mathrm{~mm}(85 \mathrm{in})(\mathrm{D}) \times 1070 \mathrm{~mm}(42.1 \mathrm{in})(\mathrm{W})$
- HEIGHT : 1550 mm (61in)
- POWER : 630 W
- C. R.T : 26 INCH
- WEIGHT : 350 kg ( $\mathbf{7 7 2} \mathrm{lbs}$.)

NOTE :
Descriptions herin contained may be subject to improvement changes without notice.

## INTRODUCTION OF THE OWNER'S MANUAL

SEGA ENTERPRISES, LTD., supported by its high electronic technology of LSIs, microprocessors, etc. and a wealth of experience, has for more than 30 years been supplying various innovative and popular game machines to the world market. This OWNER'S manual is intended to provide detailed comments together with all the necessary information covering the operation in general of electronic assemblies, electromechanicals servicing control, spare parts, etc. as regards the SUPER MONACO GP a new SEGA product. The manual is intended for those who have knowledge of electricity and technical expertise especially in ICs, CRTs, microprocessors, etc. Carefully read so as to acquire sufficient knowledge before working on the machine. Should there be a malfunction, non-technical personnel should under no circumstance touch the interior system.

## 1. HANDLING PRECAUTIONS

When turning the power $O N$, pay attention to the following points:

Since the power consumption of this game averages 630 W and is approximately l,300W at the maximum, plug in only one machine per wall socket box. The outlet used should have a capacity exceeding 15A for the $100-120 \mathrm{~V}$ areas and 7 A for the $200-240 \mathrm{~V}$ areas.

When the power supplied is insufficient, the unit will function in an unstable manner and cause machine trouble, so be careful of this point.

Also, avoid using an extension cable as much as possible, and when in an unavoidable circumstance one is utilized, it should have a capacity which exceeds 20 A for the $100-120 \mathrm{~V}$ areas and 10A for the 200-240V areas. Also, pay attention to the fact that the rated current of the cord reel type extension cable indicates the current in the condition when the cable is fully unwound from the reel.

A single $A C$ motor is used for the machine's compressor drive and its revolution differs depending on the frequency. Change the pulley to correct the revolution to the specified value.

As viewed from the motor unit, use the outside pulley for 60 Hz and the inside one for 50 Hz (refer to the Items, Explanation of AIR DRIVE SYSTEM, and Repositioning of the belt). Check to see that the machines' specifications indicated on the cabinet's front door and power cord are identical with those of the place of installation's power supply.

When installing or inspecting, be very careful of the following points and pay attention to ensure that the player can enjoy the game safely.

- Be sure to turn the power off before working on the machine.
- To insert or pull out the plug quickly is dangerous.
- It is necessary to make sure that the power cord or the grounding wire is not exposed on the road, etc. in a manner so as to be dangerous. Make sure that grounding connections are made safely at the position where so specified.
- Do not use any fuse that does not meet the specified rating.
- Make complete connections for the IC board and other connecters. Insufficient insertion is very dangerous.

Also, for the IC board circuit inspections, only the logic tone is allowed. The use of a tester is not permitted, so be careful in this regard. After confirming that there are no irregularities, turn the power ON.

## PERIODICAL SERVICING \& INSPECTION

O Check the contents of the compressor's oil tank each month.
O Drain water from the filter once a month.
O Replace the tire (AIR TANK) once every two (2) years

Be sure to follow the PRECAUTIONS for handling, installation, place of installation, counterfeiting and periodical inspection.

## 2. PREVENTION OF COUNTERFEITING AND CONVERSION

## LABELLING

To prevent counterfeits and conversions, the following labels are put on all the SEGA products. When handling such goods, be sure to confirm the labels. They are used to prevent illegal acts such as the unauthorized copying of the products and the printed circuit boards thereof or carrying on business by manufacturing similar merchandise or by converting, selling or using such products or printed circuit boards.

## ORIGINAL SEAL

The following seal is put on the machines manufactured by SEGA.

## LICENSE SEAL

The following seal is put on the kits, such as the printed circuit boards, of SEGA products.

## COPYRIGHT NOTICE

This SEGA product has the copyright notice as follows:
(C) SEGA 1989

This signifies that this work was disclosed in 1989 and is the property of SEGA ENTERPRISES, LTD.

## 3. PRECAUTIONS CONCERNING THE PLACE OF INSTALLATION

The SUPER MONACO GP is an indoor game machine. Absolutely do not install it outside. Even indoors, avoid installing in places mentioned below so as to ensure proper usage:
o Places subject to rain or water leakage, or condensation due to humidity.

- In the proximity of an indoor swimming pool and/or shower.
- Places subject to direct sunlight.
o Places subject to heat sources from heating units, etc., or hot air.
o Vicinity of highly inflammable/volatile chemicals or hazardous matter.
- Sloped surfaces.
- Vicinity of anti-disaster facilities such us fire exits and fire extinguishers.
- Places subject to any type of violent impact.
- Dusty places.

## 4. INSTALLATION PRECAUTIONS AND MOVING THE MACHINE

## INSTALLATION PRECAUTIONS

The machine is equipped with 7 casters ( 4 front and 3 rear) and 8 leg adjusters (4 each, front and rear). When the installation position is determined, make an adjustment by providing approximately a 5 mm gap between the floor level and the castors, so that the machine will be kept in a level position. An insufficient gap may cause the machine to move during game play and result in a dangerous situation.

## MOVING THE MACHINE

The machine weighs approximately $350 \mathrm{~kg} .(772 \mathrm{lbs}$.$) , therefore,$ when moving it on the floor, lift the leg adjusters.

## 5. NAME OF PARTS

(1) 26 INCH MONITOR
(iz) COIN CIIU'I'E 'IOWER ........... COIN INIAE'I'
(3) FRON'I CABLNE'I
(4) HANDLE UNIT ................ Operates the machine.
(5) ACCELERATOR/BRAKE UNIT .... Controls the machine speed.
(6) SHIFT LEVER UNIT .......... Allows for gear shifts so as to
(7) REAR CABINET meet the engine revolutions.
((i) ROOF
(9) SEAT MECHANISM ............ Moves the seat.
(i0) AIR SUPPLY ................ Controls the HANDLE and the SEAT.
(11) PC BOARD

## 6. DISASSEMBLING

(1) Remove the COIN CHUTE TOWER (SLC-0100) from the FRONT CABINET (SLC-1000).
(2) Remove the JOINT BRACKET (SLC-0007) which links the FRONT and REAR CABINETS.
(3) Take off the TAMPERPROOF SCREWs (M4 $x$ l0, M4 $x 25$ ) which connect the FRONT and REAR COWLs.
(4) Remove DOOR-L (SLC-2007), one each on both sides of the REAR CABINET.
(5. Remove the 4 HEXAGON BOLTS (M8 x 50 ) which link the FRONT and REAR CABINETs.

## 7. AC UNIT

MAIN SWITCH

Turning the MAIN $S W$ ON results in a state of STANDBY.

## CIRCUIT PROTECTOR

Subjecting the machine to an excessive load causes the circuit breaker to function and the movements of the parts to stop.

First remove the cause of such malfunction and then restore the CIRCUIT PROTECTOR back to its original state.

## 8. GAME POSITION ADJUSTMENTS

To move the seat position, follow the procedure below:

PROCEDURE 1. The seat is secured by a total of four HEXAGON BOLTS (M8 x 35), 2 each applied to both sides as shown. First, remove the 4 BOLTs (M8 x 35) and the 2 PROTECTOR HOLDERS (SLC-2040) .
2. Ihe seat can be adjusted in 5 positions (forward/backward).

Note: The numbers stated are in mm.

## 9. STEERING HANDLE VR ADJUSTMENTS

The VR adjustments can be made by taking off the 6 TAMPERPROOF SCREWs (M4 x 40 ) and removing the FRONT DOOR (SLC-l003). When taking off the door, simultaneously disconnect the FAN MOTOR's 3P CONNECTOR.

Before adjusting the VR, be sure to turn the BREAKER SW OFF. After making the adjustments, turn the power OFF when turning the BREAKER SW back ON again.

BREAKER

VR adjustments will be made in the TEST MODE's INPUT TEST screen.
(i) Loosen the 2 SCREWs "A" (M4 $x$ 8) of the VR BRACKET (SLC-1050), turn GEAR "A", and make sure that the on-screen nunerical value becomes approximately 80 H . When loosening the screws, adjust the gear backlash.
(2) Next, loosen the NUT (M6) and 2 SCREWs "B" (M4 x 8) which secure GEAR "B", turn GEAR "B" and make fine adjustments to $80 \mathrm{H} \pm 1$.

After making the VR adjustments, be certain to turn the power OFF before turning the BREAKER SW ON.

| Minimum |
| :---: |
| value |
| (Lower than 20 H$)$ | Reference Values | Maximum |
| :---: |
| value |

10. REMOVING THE SHIFT UNIT AND REPLACING THE SWITCHES

## REMOVING THE SHIFT UNI'T

(1) First remove the SHIFT COVER (SLC-1032) by taking off the four M4 TAMPERPROOF SCREWS.
(2) Pull out the wires (gray) from the CABINET's inside and disconnect the CONNECTOR (brown 3P).
(3) Release the 4 NYLON CLAMPs (280-5124-03) which secure the wires, by taking off the 4 screws.

(4 Take off the EMBLEM (POW-2061) by taking out the M4 TAMPERPROOF SCREW.
(5) Remove the STEERING HANDLE (KR-1121Y) by taking off the three M6 CAP SCREWs.
(6) Remove the two SHIFT COVERs (SLC-1065, SLC-1066) by taking off the two M4 TAMPERPROOF SCREWs and the four M4 FLAT SCREWs.
(7) Remove the MOUNT SCREW (SLC-1033) and take out the SHIFT LEEVER UNI'T (SLC-1300).

## -CAUTION -

> THE STEERING HANDLE portion tends to be subject to great shock, causing the screws to easily become loose, therefore, be sure to securely tighten them. When installing the STEERING HANDLE, fasten the three M6 CAP SCREWS by applying a $180 \mathrm{kgf} \cdot \mathrm{cm}$.

## REPLACING THE MICROSWITCH

(1) Remove the SHIFT COVER (SLC-1065, SLC-1066) in the same manner as when taking out the SHIFT LEVER UNIT.
2. The MICROSWITCHes can be taken out by renoving the wire's soldering and taking off the two M3 SCREWs from each MICROSWITCH.
(3) The MICROSWITCH's fine adjustments can be made by loosening the two M4 SCREWs and moving the ADJUSTMENT BRACKET (SLC-1309).

## 11. REMOVING THE ACCELERATOR / BRAKE UNIT AND ADJUSTING THE VR

The ACCELERATOR/BRAKE UNIT can be removed from the cabinet floor by taking off the four HEXAGON BOL'Ts (M8 x 25).
djusting the Accelerator/Brake

Perform the numerical adjustments in the test mode's INPUT TEST screen.
i) Loosen SCREW "A" of the VR BRACKET (POW-2310), turn GEAR "A", and make sure that the on-screen numerical value becomes approximately 20 H . When fastening the screws, adjust the gear backlash.
(2) Next, loosen SCREW "B", turn GEAR "B" and make fine adjustments to $20 \mathrm{H}+4$.

(3) Also, apart from the numerical values, adjustments can be made by means of the CURSOR. When the accelerator and the brake are released, if the on-screen CURSOR is in a position lower than the plus range, or when they are fully applied, if it is in a position higher than the plus range, then, the adjustments are considered satisfactory.

## 12. AIR DRIVE SYSTEM

## A. OUTLINE OF THE AIR DRIVE SYSTEM

In the previous simulator type games, the cabinets were driven by a rotating force resulting from the revolution of an electrically operated motor via various mechanisms. However, in this machine, the newly developed AIR DRIVE SYSTEM, in which compressed air drives the cabinet, is adopted.

In this system, the air compressed by the compressor is stored in a tank, and releasing it or stopping it from being released by means of an electromagnetic valve controlled by the CPU causes the actuator (air cylinders in the case of this machine) to operate and drive the cabinet.

The compressed air utilized in this machine allows for a very quick response which can not be expected of electrically operated machines. In addition to the above quick response, the system enables colorful expressions to be realized by controlling the compressed air pressure and flow.

## B. COMPONENTS OF THE AIR DRIVE SYSTEM

The AIR DRIVE SYSTEM is comprised of the following component equipment:
(1) COMPRESSOR UNIT

This is the unit which compresses air by turning the COMPRESSOR through the use of an AC MOTOR.
(2) AIR TANK

Stores the air compressed by the COMPRESSOR. In this machine, a truck tire which was specially fabricated for this purpose is utilized.
(3) SUBDRIVER UNITT

This protects the COMPRESSOR's AC MO'ROR by causing the current to be ON/OFF via an SSR (SOLID STATE RELAY) and also safeguards against an overcurrent by means of a breaker.

## (4) FILTER

Protects valves and cylinders by filtering the dust particles and water content in the compressed air.
(5) REGULATOR UNIT

This regulates the compressed air in the tank (the primary side) to the set pressure (the secondary side). There are two regulators, each with both high and low pressure settings. Also, provided are the 3 -port valve which changes to high pressure from low pressure or vice versa, and the 4 -port valve for the handle cylinder.
(6) DRIVE BOARD

This board controls the entire AIR DRIVE SYSTEM by causing the COMPRESSOR to turn depending on the pressure inside the tank and each valve to open/close by transmitting signals in a manner that matches how the game play is proceeding, etc.

This has a 4-POR'T VALVE and a SPEED CONTROLLER (each one of them being provided for the left and right turns respectively) for the CYLINDER which causes the seat to turn.
(8) LIF'I VALVE UNI'I'

This is equipped with two 4 -port valves for the cylinder which moves the seat up and down, two SPEED CONTROLLERs used for low speed and two 2-port valves (for bypassing) used for high speed.

Through the use of an AIR CYLINDER in the STEERING WHEEL mechanism, this machine allows the player to enjoy the simulated feel of driving an actual car.

The centering mechanism is comprised of the CAM attached to the steering shaft, AIR CYLINDER, and the ARM which jojns the AIR CYLINDER and CAM. Normally, low pressure is applied when centering. As compressed air enters the CYLINDER, the JOINT is lifted. This force, with the CENTER SHAFT working as a fulcrum, will cause the BEARING to be pressed downward. At this time, the CAM starts to turn, causing the BEARING to come closer to the STEERING SHAFT. The centering position is where the CAM's groove is closest to the S'LEERING SHAF'I. With the pressure being applied, the centering action takes place.

Similarly, with the steering wheel turned to a certain direction, the high pressure being applied to the CYLINDER will result in various movements. As mentioned above, 2 different kinds of air pressure, i.e., low (for centering) and high is utilized in the STEERING MECHANISM's AIR ÇYLINDER. Also, the AIR PRESSURE can be regulated by using a regulator.

For details, refer to (G) CHANGING THE SE'T PRESSURE.

## C. REMOVING THE COMPRESSOR UNIT

DANGER! Before removing the COMPRESSOR UNIT, be sure to turn the power OFF and conEirm that the COMPRESSOR has cooled off.
(1) Take off the six TAMPERPROOF SCREWs and open the CABINET's FRONT DOOR.
( $\overline{2}$ ) Press the AIR FILTER's DRAIN NOZZLE by hand and extract the air contained in the AIR TANK until the pressure gauge is at $0 \mathrm{kgf} / \mathrm{cm}^{2}$.
(3 Take off the nut from the air outlet on the upper part of the COMPRESSOR, and pull out the copper pipe (the temperature of this pipe may sometimes be very high, so pay careful attention to this point).
(4) Disconnect the CONNECTORs in the vicinity of the COMPRESSOR (Blue 3PXI, Green 3PXI, Red 2PXI).
(5) Remove the AIR TUBEs (transparent, X3), one each for the PRESSURE SW, PRESSURE GAUGE, and UNLOADER VALVE.

(6) Take off the 4 BOLTs which secure tha plywood and remove the COMPRESSOR UNIT.
(7) Reinstall the COMPRESSOR UNIT in the procedure opposite to that used when it was disassembled.
(8) After the installation, turn the power $O N$, run the machine for a while and confirm that there is no air leakage from the joints, etc. (if there is any air leakage, the CPU may cause the COMPRESSOR to stop operating).
(9) When installing the FRONT DOOR, make sure that its fan is turning.

- CAUTION! -

If the fan is not turning, the machine's interior may become very hot and cause some malfunctioning to occur.

- CAUTION! -

An extreme incline of the COMPRESSOR or dropping it down on its side may cause the oil in the COMPRESSOR to leak out.
D. REPOSITIONING OF THE BELT
(1) Remove the COMPRESSOR UNI'T (refer to REMOVING THE COMPRESSOR UNIT) .
(2) Take off the four BOLTs which secure the AC MOTOR.
(3) In the case of 50 Hz , put the belt on the larger pulley, and for 60 Hz , on the smaller pulley.
(4) There are two sets of holes for the AC MOTOR, each set of holes matching the pulley to be used. Therefore, by utilizing the correct holes which allow the belt to be put on properly, firmly secure the AC MOTOR with 4 BOLTs.

- CAUTION! -

[^0]

## E. REPLENISHMENT OF THE COMPRESSOR OIL

This machine uses an oil type COMPRESSOR and as such, the oil content should be checked periodically (approximately once $a$ month) and replenished if it has decreased.

- CAUTION! -

Operating the COMPRESSOR without oiling may cause it to seize up and result in damage.
(l' Take of l the 6 TAMPERPROOF SCREWs and open the cabinet's FRONT DOOR.
(2) Ascertain the oil content by looking at the oil gauge on the side of the COMPRESSOR (using a flashlight, etc. will enable you to easily check it). If the level is in between the two red lines of the oil gauge, then it is satisfactory. Replenish the supplied oil immediately if the oil level is below the lower red line or when it can not be seen at all.
(3' When replenishing the designated oil, be sure it is done from the oiling port on the front of the COMPRESSOR by using the supplied funnel. Pay careful attention so that the oil does not go beyond the upper red line.
Note that when replenishing, it is unnecessary to extract the oil remaining inside the COMPRESSOR.

## - CAUTION! -

```
Using oils other than those designated is not allowed as it may cause problems to occur. Trouble resulting from the usage of undesignated oils is not subject to our warranty, therefore, pay special attention to this point.
```

| Designated <br> Oil | TOSHIBA TOSCON OLL |
| :--- | :--- |

OIL GAUGE
OILLEVER

## F. DRAINING WATER FROM THE FILTER

In order to filter the dust and water content which are compressed together with air, a filter is equipped. When the water contained in the filter exceeds a certain quantity level, it automatically drains into the water tank and should be disposed of. The water accumulated in the FILTER will be extracted from the NOZZLE 'TUBE's tip into the water tank when you push the DRAIN NOZZLE with your finger. At this time, the water and the compressed air will spout out, so pay careful attention to this point.

- CAUTION! -

```
The temperature at the upper part of the COMPRESSOR may become very high, so proceed very cautiously when performing any work on it.
```

## G. CHANGING THE SET PRESSURE

This machine provides each cylinder with air by regulating the COMPRESSED AIR in the TANK (the primary side) to a given pressure. Therefore, by changing the REGULATOR's set pressure, the force acting on the CYLINDER can be increased or decreased.
(i) Take off the six TAMPERPROOF SCREWs and remove the CABINET's FRONT DOOR.
(2) Pull the knob at the lower part of the REGULATOR downward until a clicking sound is heard.
(3) Turn the knob to the right or left to increase or decrease the set pressure. When doing so, watch the REGULATOR's PRESSURE GAUGE. Of the two REGULATORs, the lower REGULATOR sets the low pressure side pressure and the upper REGULATOR, the high pressure side pressure. Depending on the low/high pressure setting, there are variations as shown in the following table:

STANDARD SET PRESSURE :
LOW PRESSURE SIDE $2.0 \mathrm{~kg} / \mathrm{cm}^{2}$ HIGH PRESSURE SIDE $4.5 \mathrm{~kg} / \mathrm{cm}^{2}$
high pressure side Regulator

LOW PRESSURE SIDE REGULATOR HANDLE VALVE

|  | Changing Items |
| :--- | :--- |
| Low Pressure Side | o Handle's basic (light) heaviness |
| High Pressure side | o Heaviness when the handle feels heavy. <br> o Strength needed to turn the seat to the <br> right or left. |
|  | o Strength needed when lifting up the seat. |

o When setting the pressure, if the pressure inside the tank is insufficient, the REGULATOR's PRESSURE GAUGE will not indicate the set value correctly.
o When the high pressure side set value is changed, the three items will change at the same time, and each one can not be separately set.
o When setting the pressure higher, each item will have a heavy feel and become stronger, and when setting the pressure lower, each item will have a light Eeel and become less strong.
o The primary pressure in the tank varies at a range of 5.5 $\mathrm{kgf} / \mathrm{cm}^{2}, 6.5 \mathrm{kgf} / \mathrm{cm}^{2}$. Therefore, even if the set pressure is increased to higher than $5.5 \mathrm{kgf} / \mathrm{cm}^{2}$, the pressure will vary in accordance with the primary pressure in the tank, and as such, you should set the pressure to $5.5 \mathrm{kgf} / \mathrm{cm}^{2}$ or lower.

## H. ADJUSTMENT IN TURNING THE SEAT

In this machine, the seat turns to the left or the right due to the combination of the two AIR CYLINDERs' expansion and contraction. The CYLINDERs' expansion and contraction speed is determined by choking the cylinder's exhaust through the use of a speed controller independently used for each cylinder. Therefore, the CYLINDERs' expansion and contraction can be changed by varying the choking of the speed controllers in the following procedure:
(i.) Display the AIR DRIVE TEST screen on the monitor (refer to the TEST MODE).
(2) Take off the two TAMPERPROOF SCREWs and open the REAR CABINET's lower left side door (the rURN VALVE UNIT is seen in the center area below the REAR CABINET floor).
(3) Cause the seat to turn by selecting the "SEAT LEFT TURN" or the "SEAT RIGHT TURN" on the TEST MODE screen.
4) Determine the CYLINDERs' expansion and contraction speed by turning the knob of the speed controller which corresponds to the selected SEA'I TURN.
(5) Adjust the other CYLINDER's expansion and contraction speed in a manner so as to match the one in ( $\overline{4})$ above.
(6) When the right and left turns' speeds match, secure the knob with a DOUBLE NUT so that the speed controller setting can be maintained.

In this machine, the SEAT moves upward and downward due to the two AIR CYLINDERs' expansion and contraction combination effect. The seat's upward and downward movement has 2 speeds, i.e., "FAST" and "SLOW." "FAST" can not be adjusted due to the bypassing of the speed controller by opening the electromagnetic valve. However, in the case of "SLOW," each CYLINDER's expansion and contraction speed is determined as a result of choking the exhaust from the CYLINDER through the use of 2 SPEED CONTROLLERS, each respectively for the expansion side and the contraction side and are independent from each other.

Therefore, the CYLINDERs' expansion and contraction speed can be varied by changing the choking of the speed controllers in the following procedure:
(1) Display the AIR DRIVE TEST screen on the MONITOR (refer to the TEST MODE).

(2) Take off the 2 TAMPERPROOF SCREWS, open the REAR CABINET's lower left and right side doors, and the LIFT VALVE UNIT will appear.
(3) Move the SEAT upward and downward by selecting the "SEAT LIFT SLOW" in the TEST MODE screen.
(4) Of the 2 CYLTNDERs which lift up the SEAT, first determine the speed of either the left or right CYLINDER. Adjust the speed by turning the SPEED CONTROLLER KNOB. Two SPEED CONTROLLERS are provided for one unit, each respectively for the expansion side and the contraction side independently, and as such, adjustments in both directions should be made.
(5) Adjust the other cylinder's expansion and contraction speed in a manner so as to match the one in (4) above.
(6) When the right and left turns' speeds match, secure the knob with a DOUBLE NUT so that the speed controller setting can be maintained.

## 13. ADJUSTMENT OF THE INFRARED SENSORS

```
If there is any obstacle in between the 2 sensors or when
the direction of each sensor does not match with that of the
other, the seat stops moving.
Even if there is no obstacles between the sensors, when the
seat does not move and the red LED in the sensor on the
light receiving side (FRONT CABINET side) continues to light
up, the direction of the sensors may not be matching each
other. Therefore, make adjustments as follows:
```

## ADJUSTMENT OF THE LIGHT EMITTING SENSOR

To make adjustments for the horizontal direction, loosen SCREW "A," and for the vertical direction, SCREW "B."

ADJUSTMENT OF THE LIGHT RECEIVING SIDE SENSOR

Remove the SENSOR COVER (SLC-1053) which protects the SENSOR by taking off the four TAMPERPROOF SCREWs (M4 x 8 , M4 x 16 ).
Loosen SCREWs "C" to make adjustments for the vertical direction. Continue to make adjustments of each SENSOR (one on the light emitting side and the other on the light receiving side, until the red LED goes off.

## 14. REPLACEMENT OF THE BILLBOARD LAMP

By taking off the six TAMPERPROOF SCREWs (M4 x 20), the upper \& lower HOLDER BRACKETS (SLC-2043) and DESIGN PLATE (423-0118) can be removed.

Replace the BILLBOARD LAMP with a FLUORESCENT LAMP (FL 20W) which is available on the market.

Before replacing the BILLBOARD, be sure to turn the power OFF.

## 15. REPLACEMENT OF THE FAN MOTOR BRUSH

The FAN MOTOR is inside the FRONT DOOR. Replace the MOTOR BRUSH approximately once every six months.

(1) Take off the cap by using a screwdriver, etc.
(2) Take out the brushes for replacement (spare replacement parts are supplied).

<CATION> Replace the two brushes simultaneously.

## 16. HANDLING THE FRESNEL LENS

(1) REMOVING THE FRESNEL LENS

Remove the GLASS HOLDER L (SLC-1048) and GLASS HOLDER R (SLC-1062) by taking off the TAMPERPROOF SCREWs (M4 x 16) which are used to secure them.

Remove the FRONT GLASS (SLC-1024) by taking off the TAMPERPROOF SCREWS (M4 x 25 ) which are used to secure it, through the use of a TAMPERPROOF screwdriver.

Remove the FRESNEL LENS (SLC-1020) by taking off the four screws (M4 x $14 \mathrm{~W} / \mathrm{F}$ ) which are used to secure it. At this time, pay careful attention so as not to cause damage to the lens mentioned above.
(2) FRESNEL LENS CLEANING, ETC.

When dust, etc. adheres to the FRESNEL LENS, remove them by lightly wiping it off, using a soft cloth such as gauze, etc. with chemical detergent or alcohol being applied, and then wring it out thoroughly (when a chemical detergent is used for wiping, lightly wipe it off again with a soft cloth after applying water to it and wringing it out completely. At this time, the adhered dust can easily be removed by wiping the FRESNEL LENS surface (convexed, concaved) along the arc. Use the supplied antistatic agent to prevent the dust from adhering to the lens.
(3) INSTALLING THE FRESNEL LENS

When installing the FRESNEL LENS, pay careful attention so that the surface (convexed, concaved) is positioned towards you, in the procedure opposite to that used when it was disassembled.
(4) FRESNEL LENS HANDLING PRECAUTIONS
o When the FRESNEL LENS is subject to extremely hot temperatures, it deforms due to its properties, therefore, you should keep it away from heating equipment such as heaters, etc.
o This LENS warps when it is located at places where the temperature and humidity are extremely high, therefore, pay careful attention to this point.
o Since the LENS surface can easily be damaged, do not rub it with hard items such as a brush, etc.
o Do not wipe the LENS with a cloth containing volatile matter such as thinner, gasoline, insecticide, etc. (using said matter may cause the LENS to be cracked even in a location that has a regular room temperature).

## 17. TEST MODE

This test mainly checks the operation of game PCB's, discovers defects if any, and also checks monitor colors and audio quality. In addition, this test mode includes the item in which game setting changes are made.
A. SELECTION OF TEST Item

1. Push the TEST SW button to display the test menu.

TEST MODE
OPERATOR SCREENS (BOOKKEEPING)
MEMORY TEST
DIPSWITCH ASSIGNMENTS
game option setting
INPUT TEST
OUTPUT TEST
BACK UP RAM CLEAR
AIR DRIVE MOVEMENT CHECK
EXIT
SELECT START OR SERVICE BUTTON
PUSH TEST BUTTON
2. Press the SERVICE SW or S'TART SW to move the ">" mark downward. Bring the arrow to the desired test item and push the TEST SW again.
3. To end the test, bring the ">" to EXIT and push the TEST SW.

## B. EXPLANATION OF EACH TEST

1. OPERATOR SCREENS (BOOKKEEPING)

This allows for BOOKKEEPING of the number of game plays, game time, etc.. Push the START $S W$ to proceed to the next page. This page refers to the BOOKKEEPING of the number of coins and credits.

This page refers to BOOKKEEPING of the number of games, and scores.

## BOOKKEEPING

PAGE 2
GAME REPORT

| TOTAL GAMES | (1) | 1076 |
| :--- | :---: | :---: |
| TOP SCORE | (2) | 107295 |
| LOWEST SCORE | (3) | 5352 |
| AVERAGE SCORE | (4) |  |
|  |  | 41483 |
| TOTAL GAME TIME | (5) |  |
|  | 2D10H25M02S |  |
| LONGEST GAME TIME | (6) |  |
|  |  | 07 M 24 S |
| AVERAGE GAME TIME | (7) |  |
|  |  | $03 \mathrm{M} 15 S$ |

(i) Number of gaines
(2) High score
(3) Lowest score
(4) Average score
(5) Total game time out of the period during which the machine was energized.
(6) Longest gane time
(7) Average game time

This page indicates BOOKKEEPING of the game time classification/ Number of games.

This page shows BOOKKEEPING of the game contents.

| BOOKKEEPING | PAGE 4 |  |
| :---: | :---: | :---: |
| TRANSMISSON | (2) |  |

(3) 4-speed manual shift
(4) 7-speed manual shift
(5) The first race
(6) Number of games
(7) The second race
(8) Preliminary race's best time by using the automatic shift
(9) Preliminary race's best time by using the manual shift

This page refers to BOOKKEEPING of the Preliminary race's game time classification/number of games.

This page indicates BOOKKEEPING of the 9 best ranking drivers.
(1) Drivers' points
(2) Preliminary race's results
(3) The Eirst race's time
(4) The second race's time
(5) Name of Drivers
(6) Transmission

AT ..... Automatic shift
4S ..... 4-speed manual shift
7S ..... 7-speed manual shift

DRIVER'S POINT RANKING

| RANK | D. POINT | GRID | 1ST RASE | 2ND RASE | DRIVER | T. M. |

4. GAME OPTION SETTING

Performs the setting of the game contents.
(1) PLAY MODE ..... SINGLE PLAY

Signifies that the machine functions independently.
(2) GAME DIFFICULTY

The gane's overall difficulty level can be set to any one of the Eollowing: EASY/NORMAL/HARD/VERY HARD.
(3) QUALIFICATION LIMIT

The preliminary race's qualification time can be set (the time can be set to $40 \sim 55$ seconds).
(4) IF OVER LIMIT

Either GAME OVER or RESTART Erom the 16 th position can be preset in the case where the player exceeds the Preliminary Qualification time.
(5) AWARD SUPER LICENSE

This is for the purpose of future expansion.
(6) PLAYER's PATH CORRECIIION

The car's steering adjustment can be set to VERY LIGH'T/ LIGHT/MEDIUM/S'TRONG.
(7) ADVERTISE SOUND

ON/OFF of the sound effects emitted during the time in which the game is not played, can be set. However, even if this setting is OFF, the title music only will continue to play.

GAME OPTION SETTING

PLAY MODE ------ SINGLE PLAY
GAME DIFFICULTY NORMAL
QUALIFICATION LIMIT 45 SECONDS
IF OVER LIMIT GAME OVER
AWARD SUPER LICENSE YES
PLAYER'S PATH CORRECTION MEDIUM ADVERTIZE SOUND OFF

Indicates the status of each switch and potentiometer.

## 6. OU'TPUT TEST

Checks the operation of the START LAMP, monitor adjustments, and audio quality. When this test item is selected, the following will first be displayed on the screen:
(1) RED Brightens starting from the left towards the right.
(2) GREEN
(3) BLUE
(4) WHITE

To proceed to the next page, press the START SW.

OUTPUT TEST
PAGE 1
C. R. T. CHECK

(3)
(4)

In this page, the START SW lamp goes $O N$ and OFF.

## OUTPUT TEST

PAGE 2
START LAMP CHECK

To display the next page, press the START SW.

In this page, the sound check can be performed. By using the SHIF' SW, bring the " $\rangle$ " mark to the desired test item and push the START SW. There are 8 items of B.G.M., ll SOUND EFFECTS, 22 VOICEs, and 6 SOUND CON'TROLs.

| OUTPUT TEST |  |  |
| :---: | :--- | :--- |
| SOUND CHECK |  |  |
|  |  |  |
| B. G. M. | 1 |  |
| B. G. M. | 2 |  |
| B. G. M. | 3 |  |
| B. G. M. | 4 |  |
| B. G. M. | 5 |  |
| B. G. M. | 6 |  |

| SELECT BY SHIFT LEVER |  |  |
| AND PUSH START BUTTON |  |  |
|  |  |  |

7. BACKUP RAM CLEAR

BOOKKEEPING DATA can be cleared by pushing the START SW, bringing " $>$ " to YES (when not clearing, to "NO") and pushing the TES'r SW.

BACKUP RAM CLEAR

YES
NO
8. AIR DRIVE MOVEMEN'I CHECK

This allows the AIR DRIVE SYSTEM to be manually checked. By using the SHIFT SW, bring the ">" mark to the desired test item and then push the START SW. While the START SW is pushed, the SYSTEM continues to Eunction.

Also, as per the desired item, the machine's moving part will be highlighted on the screen.

The SAFETY SENSOR can also be checked out on the screen.

AIR DRIVE TEST

1. HANDLE REVERSE
2. HANDLE HEAVY
3. SEAT LEFT TURN
4. SEAT RIGHT TURN
5. SEAT RIGHT BANK SLOW
6. SEAT LEFT BANK SLOW
7. SEAT LIFT SLOW
8. SEAT RIGHT BANK FAST
9. SEAT LEFT BANK FAST
10. SEAT LIFT FAST

SELECT BY SHIFT LEVER AND PUSH START BUTTON

## 18. DESCRIPTION OF 26 INCH MONITOR

## 26 INCH MONITOR (NANAO)

(1) V. HOLD (Vertical synchronizing adjustment)

Allows the on-screen image's vertical distortion to be adjusted.
(2) V. SIZE (Vertical size adjustment)

Adjusts the screen's vertical size.
(3) V. POSI (Vertical position adjustment) Adjusts the image's vertical position.
(4) H. HOLD (Horizontal synchronizing adjustment)

Makes adjustments when correcting horizontal distortions.
(5) H. SIZE (Horizontal size adjustment) Makes adjustments when the horizontal size is too wide or too narrow.
(6) H. POSI (horizontal position adjustinent)

Allows the image's horizontal position to be adjusted.
(7) BRIGHT

Allows the image's brightness to be adjusted.
(8) B. GAIN

Allows blue color contrast to be adjusted.
(9) G. GAIN

Allows green color contrast to be adjusted.

10 R. GAIN
Allows red color contrast to be adjusted.

## 19. SERVICE SWITCHES

Open the COIN CHUTE DOOR, and the following SERVICE SWITCHES' layout will appear:

(1) DEMAGNETIZING SWITCH ..... Used for removing the on-screen color uneveness.
(2)SERVICE SWITCH .......... Used for the purpose of servicing and increasing the credits without registering on the meter (this allows you to check the game).
(3) TEST SWITCH ............. For the operation of this switch, see SELF-TEST.
(4) 4-CH SPEAKER VOLUME ADJUSTMENT ...... Used for adjusting the volume of the speaker.
(5) WOOFER VOLUME ADJUSTMENT ............ Used for adjusting the volume of the WOOFER SPEAKER

## (5) AC UNIT (SLC-1021)

| ITEM NO. | PART NO. | DESCRIPTION |
| ---: | :--- | :--- |
|  |  |  |
| 1 | SLC-1022 | AC BRKT. |
| 2 | SLC-1023 | AC BANDAGE A |
| 3 | SOR-1403 | AC HOLE LID A |
| 4 | SOR-1404 | AC HOLE LID B |
| 5 | SLC-1051 | AC BANDAGE B |
|  |  |  |
| 101 | $117-5168$ | TERMINAL 6P 20A |
| 102 | $270-5026$ | NOISE FILTER 20A |
|  | $270-5022$ | NOISE FILTER 20A |
| 103 | $509-5234$ | SW TOGGLE 25A |
| 104 | $512-5014-15$ | CIRCUIT PROTECTOR 15A |
| 105 | $421-6950$ | STICKER MAIN SW |
| 106 | $421-6592$ | STICKER ON-OFF |
| 107 | $421-7468$ | STICKER C. P |
| 108 | $280-5097$ | BUSHING STRAIN RELIEF 8.4 |
| 109 | $600-5500$ | CABLE \& PLUG ASSY 15A W/EARTH |

(6) ASSY VR UNIT (SLC-1036)

## (7) ASSY HANDLE CYLINDER (SLC-1039)

| ITEM NO. | PART NO. | DESCRIPTION |
| ---: | :--- | :--- |
|  |  |  |
| 1 | SLC-1040 | CYLINDER HOLDER |
| 2 | SLC-1041 | CYLINDER SHAFT |
| 3 | SLC-1042 | ROD END |
|  |  |  |
| 101 | $601-6243$ | AIR CYLINDER 25-50 |
| 102 | $601-6252$ | AIR JOINT 6-1/ 8 |

## (8) ASSY HANDLE UNIT (SLC-1100)

ITEM NO.

| 1 | SLC-1101 |
| ---: | :---: |
| 2 | SLC-1102 |
| 3 | SLC-1103 |
| 4 | SLC-1104 |
